Orographic Effects on the Life Cycle of Convection

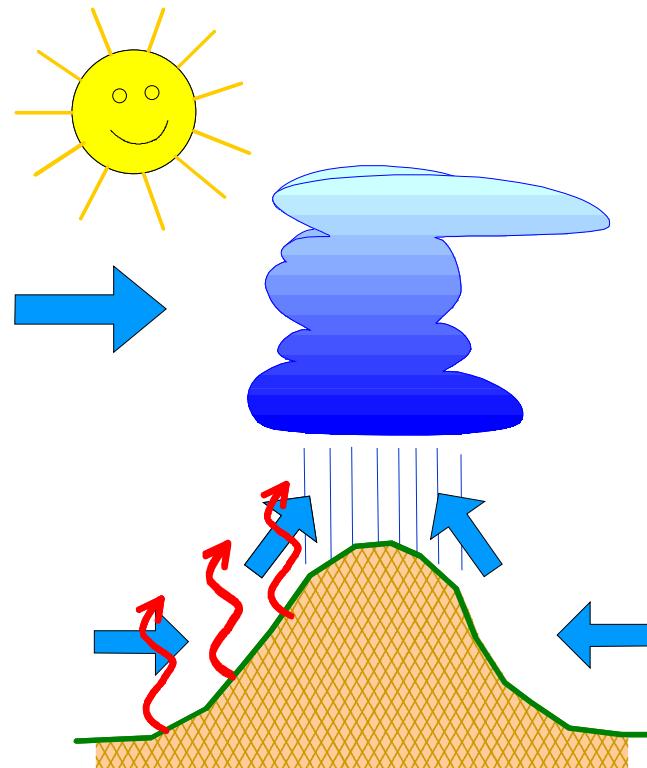

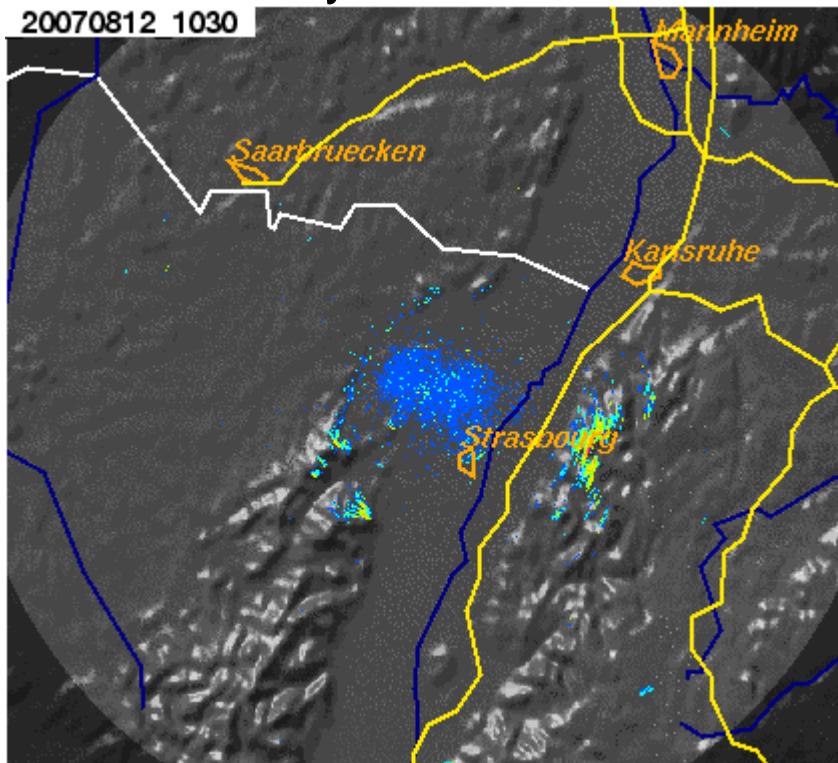

- One of the main objectives of COPS is to study the orographic effect on the initiation and life cycle of convective precipitation.

POLDIRAD observations during IOP 15 (daytime)

12 Aug. 2007 11-17 UTC
every 10 minutes

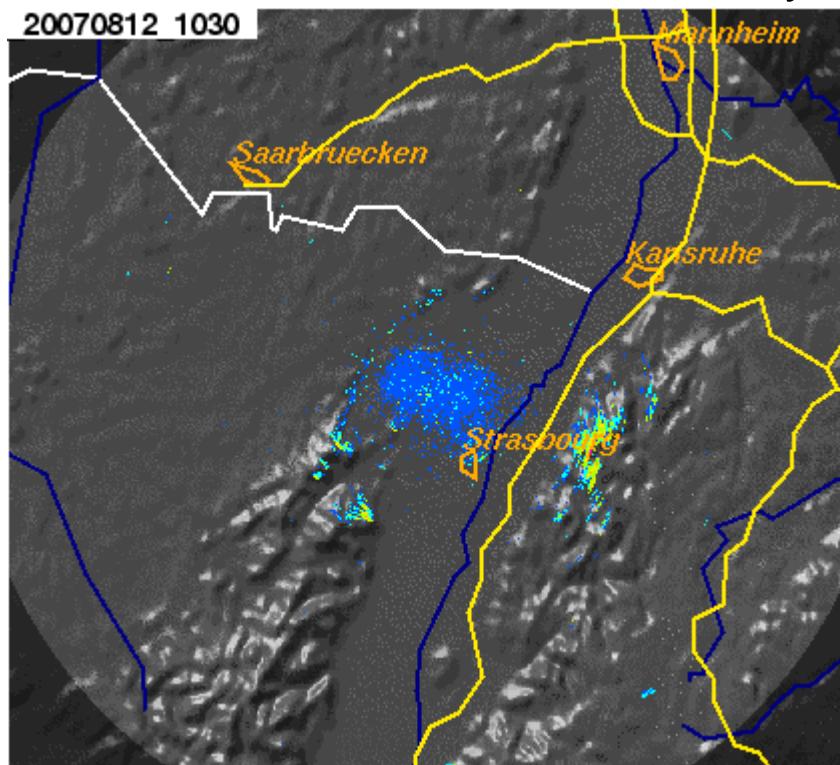

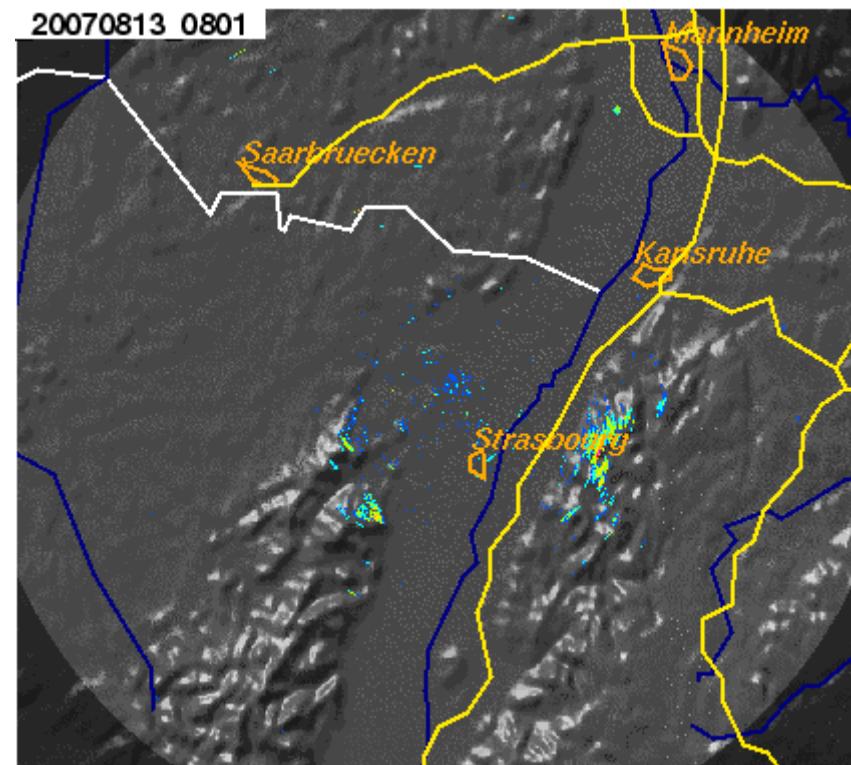

POLDIRAD observations during IOP 15 (daytime)

12 Aug. 2007 11-17 UTC

every 10 minutes

13 Aug. 2007 8-15 UTC

Conclusions

- Differences are caused by the wind field

- Models are able to simulate the situation and can provide additional information on the background of observations
- one of the COPS fundamental hypotheses
“Location and timing of the initiation of convection depends critically on the structure of the humidity field in the planetary boundary layer”
has to be amended: ➔ the wind field is also of importance
